

# MIRROR INSTRUCTIONS

## Complete Mirror Parts:

shell	metal button front
collet	metal open "ring"
mirror	round glass
mirror shim	round flat metal piece
mylar	plastic cover

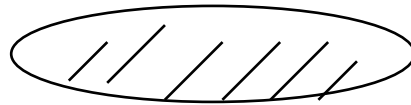

NOTE: Collet and mirror are used in place of a pinned back.

## Assembly instructions:

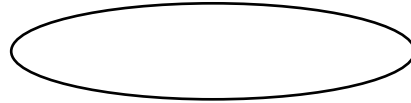

1. Use shell, your design, and mylar as in pinned backs.
2. Place collet with edges facing up in machine.
3. Place mirror with reflective side facing down in machine.
4. Slightly bend the shim (45°-60° angle) so there is a crease in the center.
5. Place bent shim on the mirror, crease facing up, and continue assembly. The bent shim is used as a spring to provide resistance between the shell and the mirror.
